Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • “I need accurate HDI predictions for my country.” • I want reliable data to support policy decisions.	• “Can I trust the prediction results?” • I need quick insights without manual calculations.
	Government Policymaker (Primary User)

DOES

- Collects socio-economic data.
- Reviews reports and visualizations before making decisions.

FEELS

- Concerned about making accurate decisions.
- Confident when the system provides reliable predictions and clear visualizations.
